

SHEFFIELD UNIVERSITY STUDENT VILLAGE

LJ MONKS - PROJECT BRIEFING

LJ Monks Limited

Sheffield University Student Village

Sheffield University, like others, has to compete to attract local and foreign students by offering the highest class of education backed by the best facilities.

A key part of its aggressive strategy is the construction of a fully serviced Student Village on the grounds of old halls of residence.

This 3 year, £3.5m contract is creating the new services infrastructure for Sheffield University's Student Village.

The contract is to supply and install gas, water and power mains plus communications and data networking services to the site and surrounding buildings.

Our accredited mains and service layers are now on site full time and will be joined by our Data and Communications installation teams as the project progresses.

The contract is to supply all appropriate materials and a complete turn key installation package working closely with the customers on site mechanical and electrical contractors.

A key element of the SCD installation package is the test, commissioning and certification of all mains and services on site prior to handover to the mechanical and electrical contractor.

Project Summary

- Installation of gas pipework
- Installation of water pipework
- Installation of electrical mains
- Installation of communications and data networking infrastructure
- Testing and certification all the above services
